Abstract

This is the English abstract for the thesis. It should provide a concise summary of the research, including the background context, the problem statement, the methodology employed, the primary results or findings, and the main conclusions (typically between 150 and 250 words). Make sure to keep the sentences clear, structured, and easy to read.

Keywords: keyword 1, keyword 2, keyword 3, keyword 4

Titill ritgerðarinnar: Undirtitill ritgerðarinnar

*To my family, for their unwavering support and patience
throughout this journey.*

Acknowledgments

I would like to express my sincere gratitude to my supervisor, Dr. Supervisor Name, for their invaluable guidance, constructive feedback, and unwavering encouragement throughout this research. Their expertise and mentorship have been instrumental in shaping both this thesis and my development as a researcher.

I am also deeply grateful to my co-supervisor, Dr. Co-Supervisor Name, for their insightful contributions and methodological guidance that significantly strengthened this work.

I extend my appreciation to the faculty and staff of the Department of Engineering at Reykjavik University for providing an intellectually stimulating environment and the resources necessary to conduct this research.

Special thanks to the participating organizations and individuals who generously contributed their time and data to make this study possible.

Finally, I owe my deepest thanks to my family and friends for their patience, understanding, and unconditional support throughout my studies. This accomplishment would not have been possible without them.

I acknowledge the use of the Antigravity 2.0 AI coding agent (powered by Gemini 3.5 Flash, Gemini 3.1 Pro, and Opus 4.7) to assist in implementing, structuring, and formatting this APA 7th edition LaTeX template. All final content, analysis, and conclusions remain my own.

This research was conducted with the approval of the Research Ethics Committee at Reykjavik University (Protocol No. RU-2025-XXX).

Preface

This thesis is submitted in partial fulfillment of the requirements for the degree of Master of Science (M.Sc.) in Project Management at Reykjavik University.

The work presented in this thesis was conducted under the supervision of Dr. Supervisor Name (Professor, Reykjavik University, Iceland) and Dr. Co-Supervisor Name (Associate Professor, Reykjavik University, Iceland) between September 2024 and May 2026.

Unless otherwise referenced, the content of this thesis is the original work of the author.

Template and Data Disclaimer: Please note that all research data, analyses, results, and discussions presented in this document are entirely fictional and serve solely as mock template contents to test formatting and compilation. None of the historical individuals named as author, supervisors, or examiners (Erwin Schrödinger, Albert Einstein, Marie Curie, and Richard Feynman) actually participated in the writing, supervision, or evaluation of this thesis.

This Reykjavik University LaTeX thesis template was implemented and formatted by Fannar Örn Maximus Hermannsson, with development and engineering assistance provided by the Antigravity AI coding agent.

Glossary

dissertation	A formal discourse, written thesis, or treatise on a subject, usually submitted for an academic degree.
glossary	An alphabetical list of terms in a particular domain of knowledge with the definitions for those terms.
ohm	The SI unit of electrical resistance, expressing the resistance between two points of a conductor.

List of Symbols

Symbol	Description	Unit
α	Significance level / Cronbach's alpha	—
β	Standardized regression coefficient	—
N	Total sample size	—
R^2	Coefficient of determination	—
P	Active power	W
V	Voltage	V
I	Current	A
R	Resistance	Ω

Introduction

This is the first chapter of your thesis. The introduction should provide the necessary background context, state the research problem, outline the scope of the study, and explain the significance of the research topic. It should hook the reader and establish why this study is important.

Background

Describe the broad domain of your research. Provide context for the reader so they understand the setting and the general field of study.

Research Problem

Explain the specific gap in the literature or the practical problem that your research aims to address. Why does this study need to be conducted?

Research Objectives and Questions

State your primary research objectives and the specific research questions or hypotheses that guide this study.

Figure 1

Conceptual Framework of the Study

Structure of the Thesis

Briefly outline the contents of the remaining chapters of the thesis: Chapter 2 reviews the relevant literature. Chapter 3 explains the methodology. Chapter 4 presents the results. Chapter 5 discusses the findings, implications, and limitations. Finally, Chapter 6 concludes the study and suggests directions for future research.

Literature Review

This chapter provides a comprehensive review of the theoretical foundations and empirical evidence relevant to your study. The review should be organized into thematic areas that align with your research questions, identifying what is already known and where the gaps lie.

Theoretical Foundations

Introduce the main theories or frameworks underpinning your research. For example, in management research, scholars frequently draw upon the dynamic capabilities framework proposed by Teece (2007) or the resource-based view (Barney, 1991).

Key Concepts

Discuss the core concepts of your study. For example, if you are examining digital transformation, you can reference systematic reviews such as Vial (2019) to define the processual nature of digital shifts and distinguish them from mere digitization (Verhoef et al., 2021).

Empirical Review

Review previous empirical studies that are directly relevant to your topic. Focus on their methodologies, key findings, and the limitations they identified.

Research Gaps and Contribution

Conclude the literature review by explicitly highlighting the research gaps that your study aims to fill. Describe how your work contributes to the academic and practical understanding of this domain.

Methods

This chapter describes the research design, participants, data collection procedures, measures, and analytical strategy employed in your study. Provide enough detail so that other researchers could replicate your study.

Research Design

Describe the overall research design (e.g., quantitative, qualitative, or mixed-methods). For example, mixed-methods studies frequently employ a sequential explanatory design (Creswell & Creswell, 2018).

Participants and Sampling

Describe the target population and your sampling strategy. Present the demographic characteristics of your sample in an APA-style table, such as Table 1.

Table 1
Demographic Characteristics of Study Participants

Characteristic	Number (<i>N</i>)	Percentage (%)
Gender		
Male	45	45.0
Female	55	55.0
Age Group		
18–34	30	30.0
35–50	50	50.0
51+	20	20.0

Note. Total Sample Size $N = 100$. Percentages may not sum to 100 due to rounding.

Measures and Data Collection

Describe the instruments, scales, and data collection procedures used. Explain what variables were measured, what scales were used (e.g. 7-point Likert scales), and how reliability was established.

Data Analysis

Outline the statistical techniques or qualitative analysis methods used to analyze the collected data. Mention any software packages utilized (e.g., R version 4.3.1 R Core Team, 2023).

Results

This chapter presents the findings from your study. Present the quantitative and/or qualitative data analysis results objectively, using tables and figures to summarize the data where appropriate.

Quantitative Results

Descriptive Statistics and Correlations

Begin with descriptive statistics and intercorrelations among the study variables. Table 2 presents the descriptive statistics and correlations.

Hypothesis Testing

Summarize the results of your hypothesis testing. Table 3 summarizes the path coefficients and decisions.

Figure 2 shows the path coefficients in a path diagram.

Table 2
Means, Standard Deviations, and Correlations Among Study Variables

Variable	<i>M</i>	<i>SD</i>	1	2	3
1. Variable A	4.5	1.1	—		
2. Variable B	4.8	0.9	.52**	—	
3. Variable C	5.1	1.2	.38**	.44**	—

Note. *N* = 100. Mean (*M*) and standard deviation (*SD*) are reported. ** *p* < .01.

Table 3
Summary of Hypothesis Testing Results

Hypothesis	Path	Coefficient (β)	<i>p</i>	Decision
H1	Variable A → Variable C	.34	< .001	Supported
H2	Variable A → Variable B	.52	< .001	Supported
H3	Variable B → Variable C	.28	.015	Supported

Note. Standardized coefficients reported.

Figure 2
Structural Model With Standardized Path Coefficients

Qualitative Results

If your study includes qualitative data, present the themes that emerged from the thematic analysis. Use direct quotes from participants to illustrate each theme.

Theme 1: Title of Theme 1

Explain the first theme and provide representative quotes:

This is an example quote from a participant representing the first theme. It illustrates the specific point being made in this section.

Discussion

This chapter interprets the results in the context of the literature review, discusses the theoretical and practical implications, and outlines the limitations of your study.

Interpretation of Findings

Discuss how your findings compare to previous research. Do they support, contradict, or extend prior studies (e.g. Duchek, 2020 or Denyer, 2017)? Interpret the meaning of any significant or non-significant paths in your model.

Theoretical Implications

Explain how your study contributes to theory. Does it extend an existing theory, apply it in a new context, or propose a new conceptual framework?

Practical Implications

Outline the practical recommendations for managers, practitioners, or policymakers based on your findings:

1. **Recommendation 1:** Brief explanation of the recommendation.
2. **Recommendation 2:** Brief explanation of the recommendation.

Limitations and Future Research

Acknowledge the limitations of your research (e.g. sample size, cross-sectional design, generalizability). Suggest specific directions for future researchers to expand upon your work.

Conclusion

This final chapter summarizes the key findings of your thesis, reinforces the main contributions, and offers concluding remarks.

Summary of Key Findings

Provide a brief, high-level summary of the main results of your study and how they address your research questions or objectives.

Contributions of the Study

Summarize the theoretical, practical, and methodological contributions of your thesis. What is the key takeaway of your research?

Concluding Remarks

End the thesis with a thoughtful concluding paragraph that reflects on the broader significance of the topic and leaves a lasting impression on the reader.

Appendix A

Survey Instrument

This appendix presents the survey instrument used in the study.

Section A: Demographics

1. What is your age group?
 - a) 18–34
 - b) 35–50
 - c) 51+
2. What is your gender?
 - a) Male
 - b) Female
 - c) Other / Prefer not to say

Section B: Constructs

Please indicate your level of agreement with each statement (1 = Strongly Disagree, 7 = Strongly Agree).

1. Statement representing item 1 of Construct A.
2. Statement representing item 2 of Construct A.
3. Statement representing item 3 of Construct A.

Appendix B

Supplementary Tables

This appendix presents supplementary tables referenced in the main text.

Factor Loadings
